

GROUND

Surface finishes for aluminium and metals since 1974

A deep abrasion system that gives the surface a very worn look, normally used as a preliminary treatment prior to polishing or brushing: used for example to remove the signs of injection in castings (scarfing).

Tecno Alluminio srl : surface finishes for aluminium and metals since 1974

Since 1974, Tecno Alluminio has proposed attractive and practical surface finishes such as anodizing, brightening and powder coating, on products in aluminium and its alloys. The company proposes its mechanical and chemical metal surface finishes in a variety of sectors, for example bathroom fittings, home furniture (living, kitchen, one brand furniture), lighting engineering, automotive (auto, motorcycle, movement), railway, building, mechanical machine shops, mechanics, leather goods, medical / hospital, orthopaedic, sports equipment, recreation / sports, optical, industrial and all applications requiring embellishment and protection against corrosion and the wear and tear of accessories or profiles in aluminium and its alloys.

Ground: surface finishes for aluminium and metals.
 Bright and matt oxidation colours suitable for outdoor use: stainless steel, black, gold, blu, red, light blu, titanium, electro, silver, copper.

After the oxidation phase, we propose a series of colours. Colours combined with finishes can create an endless number of possibilities for personalisation.

The anodic oxide layer is dealt with according to the customer's request for quality and based on the item's specific use. Oxide thicknesses can range from 5 to 20 microns depending on whether the items will be used indoors or outdoors.

Oxidation is performed in three galvanic baths: the maximum length of profiles is 3800 mm.
