

Tumbled: surface finishes for aluminium and metals.
Bright and matt oxidation colours suitable for outdoor use: stainless steel, black, gold, blu, red, light blu, titanium, electro, silver, copper.

tecno alluminio

TUMBLING
Surface finishes for aluminium and metals since 1974

A mechanical vibrating system, whereby abrasive media in varying sizes and types - depending on the requested finish - are vibrated to remove mechanical processing burrs and smoothen the surface, preparing it for subsequent treatments.

Tumbling is often used as a preliminary rough-hewing phase before manually refining the item.

Tecno Alluminio srl : surface finishes for aluminium and metals since 1974

Since 1974, Tecno Alluminio has proposed attractive and practical surface finishes such as anodizing, brightening and powder coating, on products in aluminium and its alloys. The company proposes its mechanical and chemical metal surface finishes in a variety of sectors, for example bathroom fittings, home furniture (living, kitchen, one brand furniture), lighting engineering, automotive (auto, motorcycle, movement), railway, building, mechanical machine shops, mechanics, leather goods, medical / hospital, orthopaedic, sports equipment, recreation / sports, optical, industrial and all applications requiring embellishment and protection against corrosion and the wear and tear of accessories or profiles in aluminium and its alloys.
